

HP80P-5

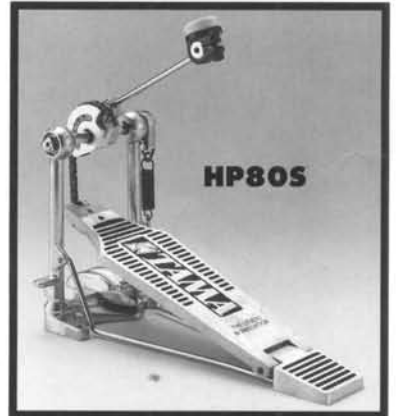

Less teeth on the sprocket means less noise-producing metal-to-metal contact. That's the reason for the HP80P-5 Rolling Glide Sprocket's much quieter operation. The placement of specially designed guides on both sides of the HP80P-5 cam ensure the Rolling Glide chain remains centered during even the most demanding performances.

STANDARD MODEL

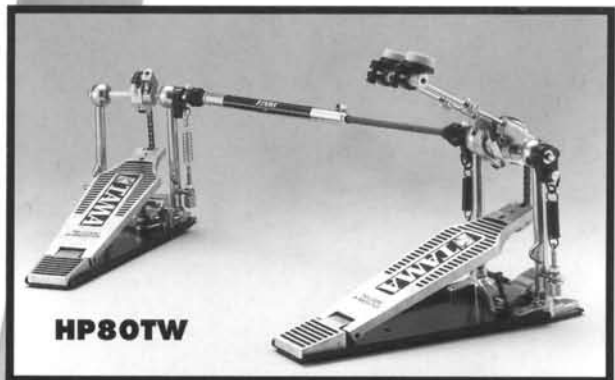

HP80S

The newest series of the Iron Cobra group, the HP80P, features a completely redesigned sprocket. This unique design combines the uniform response of the Rolling Glide cam with the studio-quiet operation of the Power Glide.
